

Directions for use:

1. Add your pesticide to water and mix thoroughly into a solution.
2. Add Spread Coat® to the solution and mix.
3. Spray a small amount of the Spread Coat® treated solution on a few leaves and look closely to make sure the solution is not beading up and running off.

If the sprayed solution is not completely covering the leaves add more Spread Coat® and test again. Repeat these steps until a nice even coat with little waste is achieved. Make note of how much Spread Coat® was needed for future applications.

Basic dosage:

5-10ml (1-2 teaspoon) of Spread Coat® per gallon of solution.

Wetting Agent

Keep Out of Reach of Children

Principal Functioning Agents:

Potassium Salts of Fatty Acids .. 100%

Spread Coat® is not a pesticide.

Plants, insects and powdery mildew have something in common; they shed water to stay dry. Spread Coat® is a plant-based wetting agent that helps pesticides properly coat leaves, stems and pests.

The longer pesticides stay on the plant the better the application. Spread Coat® gives the grower a greater chance of accomplishing the desired pest control in an economical fashion while minimizing pesticide usage and labor.

Suitable for use on all food crops and ornamental plants. Not for use on aquatic sites.

Do not contaminate water, food or feed by storage or disposal.
