

## ZEPHER 102

NO. 01.08

To get the best performance from your knife take the time to read through these simple tips.

**PRACTICE AND PATIENCE** When you first use your ZEPHER, it may take a little time to master the technique, but follow these tips and you will be cutting like a pro in no time. Practice removing only a few sheets initially and increase the amount gradually as experience is gained. Do not try to remove too many sheets at one time; remember, two cuts are better than one.

### STARTING THE CUT

While resting your hand on the roll, use your thumb as a guide to insert the tip and begin the cut. If you feel resistance, try a different spot on the edge.

**DO NOT** insert the tip into the roll at an angle. The knife must be horizontal to the roll when starting the cut. **DO NOT** pry when inserting the tip or it may become damaged.

### EXECUTING THE CUT

Keep the knife horizontal or tipped slightly forward to the roll when cutting. Apply downward, forward pressure on the nose through the entire cut.

**DO NOT** allow the knife nose to tip up while cutting. This can cause the knife to jam. **DO NOT** lift the knife when cutting. Downward even pressure is the trick to efficient cutting.

### CHANGE YOUR BLADES FREQUENTLY

A sharp blade is the key to achieving smooth. Your knife uses MARTOR blade No. 103
